Video: INTERCEPT™ Cut Resistance Technology

Brought To You by Ansell | Mar 03, 2020

Video Highlights

Ansell is proud to introduce a new range of HyFlex® cut protection gloves with Intercept™ Technology. Some of the advantages of this new technology include:

- Special yarn and exclusive knit construction optimize glove fit and feel
- Fabric elasticity for a tailored fit
- A proprietary coating up to 8 times more durable than similar lightweight gloves
- 2.5 times more breathable than other cut protection gloves
- A patented gripping surface minimizes the force required to grip wet and oily surfaces

INTERCEPT™ Technology is a product development platform developed to manage Ansell cut-protection innovation resources now and in the future. It focuses their growing expertise in the engineering and manufacture of cut protection styles on producing gloves optimized to meet the dexterity, tactility and comfort requirements of the world's most demanding industrial and lab workplaces.

INTERCEPT™ is engineered as part of a portfolio of advanced technologies developed by Ansell to transform global insights about workplace needs into solutions that enhance worker comfort, protection and performance. All are critical to a better day at work.
