VIDEO: Stainless Steel Grinding Test with 3M Abrasive Belts

Brought To You by 3M Abrasives | Dec 01, 2020

TJ, 3M Abrasives expert, demonstrates the importance of choosing the right abrasive belt when grinding stainless steel. He tests two different belts to see which performs better when grinding a series of four stainless steel bars. The first belt is a general-purpose alumina zirconia belt that's a good choice for a variety of metals. The second is the **3M™ Cubitron™ II Cloth Belt 784F**. As you'll see, choosing the wrong belt to grind stainless steel could cost your shop time and money. Find the right 3M belt for your application at 3M.com/belt-selector.
