VIDEO: Probing Basics: Benefits of Automated Part Set Up

Brought To You by Renishaw | Feb 02, 2021

Before beginning the metal cutting process for any component, it is essential that the machine tool be updated to identify the local zero point and orientation of the component. Determining this manually can be time consuming, inaccurate and result in costly errors.

Renishaw's automated, on-machine probing systems can set up components consistently and accurately in a fraction of the time of manual set-up. Contact **Renishaw** to find out how you can benefit from automated process control.
