VIDEO: How to Prepare Composites for a Coating: 3M Cubitron II Film Disc 775L

Brought To You by 3M Abrasives | Apr 27, 2021

Before applying a coating or adhesive to a composite surface, you'll first need to complete a deglossing or scuffing step. 3M Abrasives recommends using a 3M Cubitron II Film Disc 775L in a grade range of 180+ to 400+ depending on your coating or adhesive requirements. Use their 775L disc with the 3M Clean Sanding System for improved disc life and a cleaner work environment. The system helps improve abrasive life, reduce airborne particulates, and increase productivity. Watch the short video above to learn more.
