Spikeless: The New Revolution in Traction

Brought To You by SureWerx | Dec 29, 2021

Several outdoor work environments require the proper safety footwear and in many cases, supplemented by ice cleats to further prevent against slips and falls especially in snowy, icy conditions. Ice cleats have proven to be significantly effective in reducing the number of slips, falls and injuries when worn in outdoor work settings where Mother Nature can introduce dangerous and slick terrain.

But what about indoor use?

Ice cleats, while incredibly effective in helping you get a grip outdoors, pose challenges among workers who shift between indoor and outdoor settings where surfaces can be equally slick. Or for that matter, workers who spend their 9-5 entirely indoors and still require traction support without using metallic cleats that can scuff up flooring and potentially pose damage or additional safety hazards.

That's where spikeless traction aids come in.

Ideal for workers shifting between outdoor and indoor settings, or those working exclusively in slippery indoor conditions, spikeless traction aids ensure proper footing at all times and eliminate the risk of damaging floors and other surfaces.

Spikeless traction aids are ideal for any worker alternating between indoor and outdoor settings, workers in slippery indoor settings such as food processing plants or emergency medical services, as well as workers who frequently need to climb ladders and want to avoid slips a spike may cause due to metal-on-metal friction.

Spikeless traction aids can have you stepping confidently in virtually any work environment.
