VIDEO: How to Increase Productivity with Consistent Tool Setups

Brought To You by Haimer | Dec 27, 2022

When machinists look for ways to increase productivity, they often purchase new tool holders or cutting tools when in reality, they need consistent tool setup processes. In this demonstration, President of Haimer USA Brendt Holden will demonstrate how setting up your complete tool assemblies the same way every time through shrink fit, balancing, and presetting technologies can increase productivity and, in turn, save you time and money.

HAIMER is the system provider for tool management around the machine tool. In addition to offering tool holders, shrink fit and balancing machines, 3D-Sensors, and solid carbide cutting tools, HAIMER now offers tool presetting machines. By providing technologies for smart production, HAIMER puts machinists ahead of the curve by offering Industry 4.0 products now, not later.
