## A Technology Ecosystem Centered on Safety and Security

Brought To You by Motorola | Mar 20, 2024

Safety has long been the critical precondition that progress and potential hinges upon – and technology has a role to play in strengthening safety everywhere.

At Motorola Solutions, they believe that people and technology are stronger when united. That's why they've purposefully transformed their focus, centering on safety and security. With about \$12B invested in organic R&D and acquisitions over the past nine years, they've created a robust and powerful ecosystem of technologies that are designed to work together – helping to protect people, property and places.

Communication devices and networks that are designed to perform in the harshest conditions and keep you connected. Video security systems powered by responsibly-built AI that help to focus human attention and act with more certainty. And voice, video and data unified in a single command center view to help provide the perspective to make quick and accurate decisions.

For example, if an armed individual approaches the entrance of a busy Emergency Room, video security analytics can activate automated alerts – dispatching security to the scene, notifying law enforcement including live video feeds, and sending mass notifications to hospital personnel across radios and smartphones – helping to keep everyone informed as the situation unfolds. Leveraging the technologies in Motorola's ecosystem, staff and first responders are better enabled to detect, respond and resolve a potentially dangerous situation.

Motorola understands that enabling collaboration between public safety agencies and enterprises is

critical to enabling a more proactive approach to safety and security. It's the driving force behind their investments to continue building their ecosystem of technologies. Because when people can work together in more powerful ways, Motorola can help solve for safer communities, safer schools, safer hospitals, safer businesses – safer everywhere.
