

How-to

VIDEO: HOW TO Win at Deburring

| Jul 30, 2024

Video Highlights

In this episode of How To, Jacob Sanchez explores the critical process of deburring, an often overlooked but essential step in machining. Jacob visits Pride Tool in Cincinnati, where Scott Schwarz and Amy Dornbusch share their experiences and challenges with deburring. They highlight the importance of ensuring no corners are cut and every part is free of burrs to maintain quality and safety.

Jacob and Scott then meet Sadler Kleve from Osborn, who demonstrates innovative deburring solutions that replace tedious manual processes with efficient machine deburring. They discuss the benefits of automating deburring within CNC machines, reducing human error, and improving overall workflow. Aaron Breehne, a skilled machinist, showcases the simplicity of programming deburring cycles, emphasizing the importance of consistency and precision.

Join Jacob to learn how these techniques can help your shop produce higher quality parts faster and more efficiently. Discover how to elevate your deburring process and achieve superior results in your metalworking operations. If you're interested in optimizing every aspect of your machining process, this is an episode you won't want to miss.

"How To" is a video content series from MSC Industrial Supply developed with the purpose of serving as a resource for all those who work in, support, and have a passion for the metalworking sector of the manufacturing industry.

Through How To, you'll gain hands-on, practical advice from industry experts currently working in the field. At MSC, we are dedicated to providing real-world practical advice to improve your day-to-day operations.
