Brought To You by SOWA Tools | Jul 15, 2025

With ShrinkSMART, users receive unparalleled features at an entry-level price point, along with the flexibility to add accessories to the same unit, according to Sowa Tool. Users can select their preferred cooling method with accessories that align to their specific needs.

Cornerstone to ShrinkSMART's advanced feature set is its SMART Coil. The SMART Coil assesses the distinct resistance of each toolholder to prevent excessive heating, which can lead to hardening or tempering. By doing so, it ensures that only the correct and suitable amount of heat is applied. Additionally, this feature supports a rapid 2-7 second shrinking cycle.

Shrinking and releasing tools in record time, ShrinkSMART automatically saves energy and conserves tool holder life through the combination of their easy-to-use pre-programmed cycles and its Smart Coil.

ShrinkSMART will appeal to all sizes of machine shops, but now smaller shops can finally benefit from shrink fit technology on a slimmer budget due to ShrinkSMART's lighter sticker price and reduced first-time operator training costs.
