Introducing Fluke Connect®

Fluke Corporation | Sep 12, 2017

Introducing Fluke Connect® the world's largest system of connected tools. Fluke Connect, an integrated system of wireless test tools and asset management software, gives maintenance managers a comprehensive view of all their critical equipment status. Now Fluke Connect Assets software includes work orders functionality.

Save time - eliminate data entry by wirelessly syncing measurements directly from your tool to an asset record or work order using the Fluke Connect® system. Having access to maintenance records simultaneously at the inspection site and from the office or an off-site location enables faster decision making and real time collaboration between team members.
