VIDEO: General Maintenance vs. Spill Response

Brought To You by Brady SPC | Aug 01, 2023

Most facilities use absorbents to clean up leaks, drips and spills. But is your absorbent program as complete as it should be? If a spill occurred, are you ready to respond? You may use absorbents as an effective way to clean up small spills, however, both OSHA and the EPA outline directives that deal with the use of absorbents.

For general maintenance, you must always have plenty of pads, rolls, socks and pillows on hand. In addition, place smaller spill kits in each machine area, and near all exits. This provides the best opportunity to contain a spill before it enters the environment.

When a spill does occur, follow the steps in this video for clean-up.

Effectively managing both your general-purpose and spill-control absorbent programs is the best way to be prepared. Rely on **Brady SPC** to supply you with the pads, rolls and spill kits that you need.
