Gear Up To Manage Traffic: On The Road Or On Foot

Brought To You by PRO-SAFE | Aug 16, 2023

Protect Your People & Equipment

Safety is about being proactive, particularly when you're dealing with traffic and pedestrians. When you make danger zones more visible with flashing lights, safety cones and barricades, and proper signage, you let people know to be alert and precautionous. Pro-Safe® offers a variety of solutions to help you stay a step ahead when it comes to safety.

Mark The Spot

Safety cones and barricades help make the trouble spots more visible. Use them to surround roadway work zones, potholes, detours and other hazards, so drivers can see them from afar. These versatile markers can also be used for indoor hazards, such as spills, maintenance areas and other hazards. They're essential to have on hand, so you're prepared when the need arises.

At Night, Add Lights

Don't let darkness hamper visibility. Add lighting to draw attention to dangers in the dark. Barricades and cones can be outfitted with flashing lights for nighttime use. Revolving warning lights can be used day or night, adding a bright flash of caution where it's needed. Hand-held light batons enhance traffic safety, whether directing vehicles, pedestrians or both.

Keep Traffic Flowing & People Safe

Keep traffic moving safely, whether it's cars or trucks on the road or pedestrians in your building. Keeping pathways and dangers clearly marked are key to safety.

Equipment to consider:

- Safety cones & barricades
- Lights
- Pedestrian barriers
- Safety gates
- Mirrors

Mark The Way

Show pedestrians where—and where not—to go with chain-style pedestrian barriers. Add signage to the chains to mark closed areas or wet floors.

Be The Gatekeeper

Safety gates meet OSHA fall protection regulations, helping prevent falls and keeping off-limits areas more secure, so equipment and inventory is better protected, as well.

Mirror, Mirror

Safety mirrors can be used indoors or outdoors, to provide a broader field of vision, help pedestrians and other traffic see hazards better and aid in avoiding collisions. They're particularly helpful in facilities where forklifts are in use. Safety mirrors also provide an added layer of security, allowing you to see an intruder that's lurking around a corner.

Be Proactive

Don't take chances with traffic control. It pays to be proactive. When you use the proper safety equipment to mark dangers and guide the way, workers and passersby are more likely to take the warnings seriously. Safety orange and flashing lights draw the eye to dangers, helping people avoid injury. Likewise, pedestrian barriers keep foot traffic on the right path and away from risk and danger.
